Preface vii
Contents viii

Chapter 1. Deterministic chaos and nonlinear dynamics

Classification of all cycles of the parabolic map
R.L. Bivins, J.D. Louck, N. Metropolis and M.L. Stein 3

Analytical conditions for strange chaotic and nonchaotic attractors of the quasiperiodically forced van der Pol equation
J. Brindley, T. Kapitaniak and M.S. El Naschie 28

Monotonicity of auto-expansions
K.M. Brucks and B. Diamond 39

Quantum and classical integrability: new approaches in statistical mechanics
R. Bullough, N.M. Bogoliubov and J. Timonen 43

State-space reconstruction in the presence of noise
M. Casdagli, S. Eubank, J.D. Farmer and J. Gibson 52

General resonance spectroscopy
K. Chang, A. Kodogeorgiou, A. Hübler and E.A. Jackson 99

An asyptotic symmetry of the rapidly forced pendulum
Y.-H. Chang and H. Segur 109

On a coupled map lattice formulation of the evolution of genetic sequences
G. Cocho and G. Martinez-Mekler 119

Nonlinear dynamics of sliding charge density waves
S.N. Coppersmith 131

Periodic orbits as the skeleton of classical and quantum chaos
P. Cvitanović 138

Nonlinear oscillations in chemical and biological systems
I.R. Epstein 152

Symbolic dynamics and characterization of complexity
B.-l. Hao 161

Homoclinic chaos for ray optics in a fiber
D. Holm and G. Kovačič 177

Lie–Poisson description of Hamiltonian ray optics
D. Holm and K.B. Wolf 189

Chaotic properties in quantum scattering
H.R. Jauslin 200

Lobe area in adiabatic Hamiltonian systems
T.J. Kaper and S. Wiggins 205

Basins of Wada
J. Kennedy and J.A. Yorke 213

Lobe area via action formalism in a class of Hamiltonian systems
G. Kovačič 226

Nonlinear dynamics and stability of analog neural networks
C.M. Marcus, F.R. Waugh and R.M. Westervelt 234

Transport in two-dimensional maps: Concepts, examples and a comparison of the theory of Rom-Kedar and Wiggins with the Markov model of Meiss, Ott and Percival
V. Rom-Kedar and S. Wiggins 248

Dynamics retrospective: Great problems, attempts that failed
S. Smale 267

Some common dynamic features of coupled reacting systems
M.A. Taylor and I.G. Kevrekidis 274

Chapter 2. Solitons and coherent structures

Stability of some stationary solutions for the forced KdV equation
R. Camassa and T.Y.-t. Wu 295

Polarization modulated solitary waves in an optical fiber
D. David and M.V. Tratnik 308

Proton transport by solitons
S. Pnevmatikos, A.V. Savin, I. Stylianou, M.J. Velgakis and A.V. Zolotaryuk 316

Davydov's soliton revisited
A.C. Scott 333

Who cares about integrability?
H. Segur 343

Period doubling solitons: yes or no?
T.P. Valkering and Th. Zeegers 360

Old and new link polynomials from the theory of exactly solvable models
M. Wadati and T. Deguchi 376

Soliton phenomena in unstable media
M. Wadati, T. Iizuka and T. Yajima 388

Two-sublattice kink dynamics and ionic defects in hydrogen-bonded chains
A.V. Zolotaryuk, S. Pnevmatikos and A.V. Savin 407

Chapter 3. Patterns and turbulence

Experiments with pattern-forming systems
G. Ahlers 421

Traveling wave convection patterns in an annular cell
K.E. Anderson and R.P. Behringer 444

Space–time complexity in nonlinear optics
F.T. Arecchi 450

Cellular automata models for the flow of granular materials
G.W. Baxter and R.P. Behringer 465

Transport of a passive tracer in time-dependent Rayleigh–Bénard convection
R. Camassa and S. Wiggins 472

Fundamental interactions of vortical structures with boundary layers in two-dimensional flows
E. Coutsias and J.-P. Lynov 482

Interfaces, membranes: rough, smooth and interacting
M.E. Fisher 498

Nonlinear waves: dynamics and transport
J.P. Gollub 501

Vortex collapse from a viewpoint of complex-time singularity
Y. Kimura 512

Using superfluid mixtures to probe convective instabilities
G. Metcalfe and R.P. Behringer 520

Decaying, two-dimensional, Navier–Stokes turbulence at very long times
W.H. Matthaeus, W.T. Stribling, D. Martinez, S. Oughton and D. Montgomery 531

Electrodeposit tree patterns in linear cells: Experiment and computer models
R.D. Pochy, A. Garcia, R.D. Freimuth, V.M. Castillo and L. Lam 539

Extended systems: the impact of nonlinear science
Y. Pomeau 546

Nonconservative dynamics of vortical structures: A statistical-mechanical perspective
H. Shen 555

Do scalar fluctuations in turbulent shear flows possess local universality?
K.R. Sreenivasan 567

Enstrophy and momentum fluxes in two-dimensional shear flow turbulence
S. Toh, K. Ohkitani and M. Yamada 569

Two-dimensional dendritic growth with anisotropy of surface tension
J.-J. Xu 579

Rotating Rayleigh–Bénard convection: Küppers–Lortz transition
F. Zhong, R. Ecke and V. Steinberg 596

List of contributors 608

Analytic subject index 609
